

A study undertaken by the Geneva Declaration on Armed Violence and Development estimated that there were approximately 490,000 intentional homicides in 2004. The study estimated that the global rate was 7.6 intentional homicides per 100,000 inhabitants for 2004.^[8] UNODC calculated a rate of 6.9 in 2010.^[9] UNODC (United Nations Office on Drugs and Crime) reported a global average intentional homicide rate of 6.2 per 100,000 population for 2012 (in their report titled "Global Study on Homicide 2013").^{[10][11]} In the 2019 edition, the global rate was estimated at 6.1 per 100,000 for 2017.^[12]

Sources

Definition

The class of violent deaths documented in this article is intentional killing of others outside of war. Deaths occurring during situations of civil unrest are a grey area.

Intentional homicide is defined by the [United Nations Office on Drugs and Crime \(UNODC\)](#) in its *Global Study on Homicide* report^[13] thus:

Within the broad range of violent deaths, the core element of intentional homicide is the complete liability of the direct perpetrator, which thus excludes killings directly related to war or conflicts, self-inflicted death (suicide), killings due to legal interventions or justifiable killings (such as self-defence), and those deaths caused when the perpetrator was reckless or negligent but did not intend to take a human life (non-intentional homicide).

Though some discrepancies exist in how specific categories of intentional killings are classified, the definitions used by countries to record data are generally close to the UNODC definition, making the homicide rates highly comparable at the international level.^[14] UNODC uses the homicide rate as a proxy for overall violence, as this type of crime is one of the most accurately reported and internationally comparable indicators.^[15]

Figures from the Global Study on Homicide are based on the UNODC Homicide Statistics dataset, which is derived from the criminal justice or public health systems of a variety of countries and territories.^[16] The homicide rates derived from criminal justice data (typically recorded by police authorities) and the public health system data (recorded when the cause of death is established) may diverge substantially for some countries.^[17] The two sources usually match in the Americas, Europe and Oceania, but there are large discrepancies for the three African countries reporting both sources.^[18] For the 70 countries in which neither source was made available, figures were derived from [WHO](#) statistical models.^[17]

Deaths resulting from an armed conflict between states are never included in the count.^[19] Killings caused by a [non-international armed conflict](#) may or may not be included, depending on the intensity of hostilities and whether it is classified as 'civil unrest' or a clash between organized armed groups.^[19]

UNODC's global study

All data in this section comes from the UNODC Research section of the [United Nations Office on Drugs and Crime](#) website.^{[1][2][3]}

By region

United Nations geoscheme with region names in the UNODC data source used in table here

Map of countries by their most recent available intentional homicide rate (per 100,000 people)

UNODC 2017 murder rates per 100,000^[20]

Region	Rate	Homicides
<u>Americas</u>	17.2	173,000
<u>Africa</u>	13.0	163,000
<u>World</u>	6.1	464,000
<u>Europe</u>	3.0	22,000
<u>Oceania</u>	2.8	1,000
<u>Asia</u>	2.3	104,000

By country, region, or dependent territory

The regions and subregions in the table are based on the United Nations geoscheme since the table sources are United Nations Office on Drugs and Crime (UNODC) reports. The U.N. recognizes that variabilities in the quality and integrity of data provided by certain countries may minimize country murder rates.^{[21][2]}

There is a total yearly **count** of homicides for each country. **Rates** are calculated per 100,000 inhabitants.

***** in **Location** column indicates a dedicated article about crime in the specific country or area.

Intentional homicide victims per 100,000 inhabitants. From UNODC.^{[1][2][3]}
