

Osmophobia

Osmophobia or **olfactophobia** refers to a fear, aversion, or psychological hypersensitivity to odors. The phobia generally occurs in chronic migraine sufferers who may have *odor triggered* migraines. Such migraines are most frequently triggered by foul odors, but the hypersensitivity may extend to all odors. One study found as many as 25% of migraine sufferers had some degree of osmophobia. The condition may also be present in individuals in substance withdrawal, specifically opioid withdrawal syndrome, where it is usually associated with nausea and/or vomiting.

Osmophobia	
Specialty	Psychology

The term *osmophobia* comes from the Greek ὀσμή - *osmē*, meaning "smell, odour"^[1] and φόβος - *phobos*, "fear".^[2] *Olfactophobia* comes from the Latin *olfacto*, "to smell at".^[3]
